

DVD AND CD GONDOLA SPECIFICATION SHEET

The CD/DVD fixture is designed to accommodate both CD's and DVD's.

Each CD/DVD shelf has slots on 1" centers all along the bottom and back of the shelf that will accommodate a nickel plated wire divider.

Each CD/DVD shelf comes with individual arm brackets and a piece of clear 3/16" acrylic that sits in the front of the shelf with flamed edges and both corners mitered at 45°. This allows the customer to browse or flip through the selection of products from front to back.

The CD/DVD shelf is 6.25" deep. This permits either face out or spine out merchandising without having to remove the acrylic front element. The shelf will also accommodate games, VHS tapes and small paperback books.

The CD capacity of each shelf without a security case is 120 CD's, or 15 CD's per face out with 8 faces across. That is a total of 1200 CD's per double sided gondola section of 10 shelves.

The DVD capacity of each shelf without a security case is 80 DVD's or 10 DVD's per face out with 8 faces across. That is a total of 800 DVD's per double sided gondola section at 67" and 640 at 56". The shorter model will not browse DVD's easily with 10 shelves so we only recommend 8 per unit.

If security cases are being used, the capacity can be reduced from 15% to 50% due to the thickness of the case.

The single sided DVD wall unit is 84" X 50" X 15" and normally has 7 shelves. The capacity without security cases is 840 CD's and 560 DVD's.

BOOKSHELF GONDOLA SPECIFICATION SHEET

The BOOKSHELF GONDOLA consists of (8) 9" flat shelves with a high back. There are wire dividers available upon request as a shelf option.

The shelf is made out of 18 gauge steel and it is 48" long. A 36" length is available upon request.

Each book shelf has a pair of arm brackets.

The shelves are all separate and can be positioned anywhere up or down the post frame.

The 84" high wall unit will accommodate 6 shelves.

A FRAME SPECIFICATION SHEET

The tpsdg gondolas are a cantilever style system made of cold rolled steel, powder coated in a variety of colors.

The gondolas are a snap-fit engineered system, which do not require any tools to assemble.

The A Frames are a starter add on style fixture that come in a variety of sizes.

We manufacture the following sizes.

Double sided floor gondola

67"HX50"LX30"W

56"HX50"LX30"W

Single sided floor gondola

67"HX50"LX15"W

56"HX50"LX15"W

Single sided wall unit that is

84"H X 50"LX 15"W.

A 36" long shelf section is also available upon request for all styles.

We will powder coat the fixture to match any standard RAL paint color at no additional charge. Custom paint colors will incur an additional charge to cover the cost of the paint required.

The basic frame consists of two 16 gauge triangular shaped steel posts with 1" slots on 2" centers and a black plastic top cap, welded to a 2" square tube frame foot and a pair of integrated sign holder bars that hold 2 thin pieces of plastic in which any 4.5" X 45.75" paper sign can be sandwiched in between.

The 56" shorter model has a sign holder that attaches to the top connector bar and sits up 6" above the fixture.

There are two connector bars that fit snugly into the slots on the inside of the triangular shaped posts. They easily hold the frame together and the connector bars are designed to hold a double sided ¼" laminated back panel as an option.

The feet come with levelers or special ball bearing casters and are made of 16 gauge steel slotted on the top so that the base deck's side tabs fit snugly into the top of the feet to hold the base deck squarely onto the frame.

The standard fixture comes with a 20" X 48" base deck that has a 2" return on the front and projects out in front of the shelf to protect the product and also provides a storage area up underneath the shelves.

A canopy shelf could be available upon request.

The fixture is also available with a high tech Triangular Shaped foot and no base deck creating a more European open bottom effect.

Both the CD/DVD and BOOKSHELF gondolas at 4 feet in length are one foot longer than most standard shelving systems which translates into 25% fewer fixtures normally required to achieve the same linear shelf requirement on a floor plan.

END PANELS AND END PANEL SHELVING SPECIFICATION SHEET

Tpsdg End Panels are either triangular or rectangular in shape and fit on the ends of the post frame without hardware.

The End Panels can come in a variety of fabrications such as screen printed laminated plywood, 3/4" thick acrylic, or solid metal.

Our standard End Panels with slat wall or plain laminates and veneers have an 18 gauge metal powder coated solid back and edging that frames the desired front panel.

The End Panels have a top bracket that secures the panel into the top 3 slots of the post and the bottom bracket has tabs that drop into the corresponding slots on the legs of the gondola frame.

We will manufacture the slat wall or solid panels in whatever matching laminate or veneers are being used throughout the library.

We have End Cap shelves that are 18 gauge powder coated steel in two sizes; 6" X 12" and 6" X 28".

If the end panels are to be manufactured by another company we will provide a CAD drawing of the end panel shape with bracket positions

marked.
The top and bottom brackets would then have to be purchased with the gondola.
